EDUCATION

The University of Illinois Urbana Champaign

May 2028

B.S. Computer Science + Geography/GIS | GPA: 3.95

Honors and Awards: Dean's List, Howard M Roepke Scholarship Recipient

Relevant Coursework: Intro to Computer Systems, Intro to Algorithms and Models of Computation, Data Structures and Algorithms, Environmental Data Science, Linear Algebra with Computational Applications, Discrete Structures

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, HTML/CSS, JavaScript, TypeScript, R, SQL, Node.js

Frameworks and Development Tools: AWS, Figma, Git,

PROFESSIONAL EXPERIENCE

Wavvest | Quality Assurance Intern

May 2026 - Aug 2026

- Automated tax-flow testing by reverse-engineering a multi-step API workflow and implementing a Bash/cURL/JSON script, reducing testing time from 3 minutes to 30 seconds.
- Tested and documented software defects across a customizable advisor-firm platform, using Chrome DevTools and LangSmith to trace WebSocket traffic and AI agent behavior.
- Improved application usability by identifying and communicating UI/UX enhancements to developers, including real-time agent status notifications and improved navigation for historical investor data.

PROJECTS

SolarScope — Solar Potential & Financial Analysis Platform | Back-End Developer

Aug 2026

Link: <https://github.com/omuley/Solar-Potential-Estimator>

- Developed a Node.js/Express backend integrating Google Solar API to transform user addresses into rooftop geometry and solar energy-production data.
- Engineered a solar optimization pipeline evaluating 50+ panel configurations per property to determine system sizing, installation costs, payback periods, and 25-year return of investment projections.
- Implemented Prisma-based response caching, reducing repeat-request latency by ~98% and cutting average response time from ~2.45s to ~31ms
- Rendered solar images from GeoTiff files through Rasterio Library and custom gradient algorithm, stored images on AWS S3 bucket

Vibe-Checker — Chrome Extension for Real-Time Sentiment Analysis | Back-End Developer

April 2026

Link: <https://github.com/lw044/dev-ada-sp26-team-2>

- Built a Chrome extension with a 6-person team that performs real-time sentiment analysis on user-selected text across webpages.
- Preprocessed and cleaned 50K+ text samples using Pandas and RegEx, then fine-tuned a DistilBERT transformer model achieving 94% sentiment classification accuracy.
- Deployed the application on Modal's serverless GPU infrastructure, reducing response time from 11 minutes to 0.9 minute.

Agri-Sense | Front-End Developer

Nov 2025

Link: <https://github.com/omuley/agri-sense>

- Collaborated with a team of 7 developers to build a web application that collects real-time plant sensor data and provides plant care recommendations
- Developed a reusable card component using React.js and CSS to display plant data and visually prioritize plants based on care urgency
- Integrated a Flask REST API with the card component to fetch and display plant data

LEADERSHIP & PROFESSIONAL DEVELOPMENT

- Gamma Theta Upsilon** | Secretary

May 2026
